

A POSSIBLE FUTURE, A PRACTICAL BEGINNING

Projekt Pachamama PARAdice

[2027 Vision]

AkashicNET.org
Conceptual artwork · A possible future

A flourishing Earth begins with care.

New Earth, Near Home

Regeneration. Belonging. Many minds.

A vision and conversation guide for small community experiments.

01 / THE INVITATION

Imagine boldly. Begin close to home.

What would a place feel like if you did not have to hide the way your mind works?

Projekt Pachamama PARAdice proposes a Living Futures Lab project within AkashicFUTURES. It explores compassionate communities, ecological repair, meaningful participation, responsible technology and a culture with space for many kinds of mind.

The 2027 horizon marks a proposed beginning. It is a creative direction, with no confirmed launch date, funding or partnership. The scenes in this edition are imagined possibilities, not predictions.

New Earth as a shared question

What could flourishing mean for people, other species and the places sustaining them? Start with clean water, nourishing food, secure shelter, care and ecological renewal. Invite different values and local knowledge into the discussion.

Why the dice?

PARAdice brings paradise into conversation with chance, uncertainty and choice. Six faces introduce six perspectives. Participants may choose, roll, choose again or pass. Collective judgement and evidence guide action.

Compassion with discernment

Buddhist-inspired compassion, Sikh seva, secular ethics and scientific inquiry can inform the work without requiring a shared spiritual identity. Wonder can inspire a question; it does not settle its answer.

Awaken within. Serve without.

A living Earth. A generous everyday life.

Conceptual artwork: an imagined neighbourhood, not a forecast.

Regeneration & reciprocity

Restore habitats, care for water and make repair ordinary. Ask whose land, knowledge and labour a proposal depends on.

Many minds, real belonging

Offer sensory choice, rest, accessible spaces and different ways to communicate. Let people define belonging for themselves.

Technology with public purpose

Reduce burdens while protecting privacy and agency. Keep participation possible without an app.

Enough, shared fairly

Explore food networks, shared tools and resilient homes. Make maintenance, costs and responsibilities visible.

Care as infrastructure

Make room for mutual aid, conflict repair and intergenerational learning, with the freedom to disagree or leave.

Wonder & inner life

Include music, contemplation, play and spiritual or secular meaning. No one has to share a belief to belong.

Six faces. More than one future.

01 EARTH

What changes for water, soil, climate and other living beings?

03 BELONGING

How do different minds, bodies, resources and backgrounds shape this experience?

05 POSSIBILITY

What could art, learning, technology and collective imagination make possible?

02 ESSENTIALS

Who can access food, shelter, energy and care? Who is excluded?

04 POWER

Who decides, benefits and does the work? How can decisions be challenged?

06 PRACTICE

What is the smallest useful experiment? What would make us revise or stop it?

A proposed conversation method, not a validated instrument, score or stage of spiritual development.

Three possible days. One place to begin.

The following sketches are editorial scenarios for discussion. They are not forecasts or reports of existing projects. Apply all six perspectives to each.

A flourishing neighbourhood

The shared garden is open, the quiet room is easy to find, and a repair afternoon welcomes beginners. People can contribute in person or in writing. Care work is recognised, and maintenance has a named owner. Ask: who still cannot access these resources?

An uneven transition

A beautiful new community hub attracts enthusiastic volunteers, but its opening hours exclude some neighbours. Digital sign-up makes participation harder for others. A few people carry most of the work. Ask: what must change before expansion?

A community under pressure

Heat, rising costs and exhausted volunteers test the plan. A small resource map helps people find public cooling spaces, food support and repairs. The group reduces its scope rather than promising more than it can sustain. Ask: what remains useful when resources shrink?

Look for actions that help across all three futures: clear information, accessible participation, realistic commitments and a way to hear when something is not working.

ADAPT as a practical foundation

Observe changing conditions. Compare responses. Attend to justice, local fit and ecosystem health. Act, evaluate and revise. PARAdice explores the lives those capacities could help support; it does not replace adaptation work.

05 / A PROPOSED FOUR-WEEK PILOT

A small experiment. A useful learning note.

Invite a small voluntary group to map local care, food, repair and quiet-space resources. Start only after participants agree that this would be useful.

Week 1 / Listen and agree

Choose a facilitator, a limited area and a review date. Agree time and cost limits, consent and how people can withdraw. Offer written or quiet participation. Ask which resources are actually missing or hard to find.

Week 2 / Map public resources

Record public opening hours, access information and contact routes. Verify details with the relevant organisation. Keep personal addresses and sensitive stories out of a public map.

Week 3 / Try it together

Invite participants to test whether the map helps them find a resource. Note unclear information and access barriers. Do not publish identifiable feedback without consent.

Week 4 / Review and decide

Ask what was useful, who was left out and how much effort it took. Correct errors. Continue, revise, pause or stop together. A small, honest learning note is a worthwhile result.

Before starting, fill in:

Facilitator / participants _____

Scope / maximum time and cost _____

Review date / feedback route _____

Stop or pause if privacy cannot be protected, participation feels pressured, or the agreed effort becomes unsustainable.

Seven chapters. Many ways to belong.

01 The Invitation

Belonging, curiosity and room to rest.

02 Water, Food, Shelter

Local resilience, evidence and the people affected.

03 A Commons of Care

Shared gardens, mutual aid and conflict repair.

04 Many Minds, One Community

Co-design for varied sensory and communication needs.

05 The Dancefloor and the Quiet Garden

Collective joy alongside silence, recovery and choice.

06 Technology in Service

Tools that reduce burdens and remain accountable.

07 From Vision to a Small Experiment

An affordable pilot with ownership, feedback and review.

An invitation, not a launch commitment

This concept edition introduces the direction. The proposed chapter series, workshop format and community pilot remain to be developed with participants.

Which chapter would make a difference where you live?

Keep the vision open. Make the next step real.

What would make your neighbourhood more
compassionate, accessible or alive?

Creative references

Coldplay's Paradise, Ozora and Ace Ventura were proposed as cultural references for hope, dance and collective joy. No affiliation or endorsement is implied. No lyrics or recordings are reproduced in this edition.

Editorial and image transparency

AkashicNET / AkashicFUTURES, 21 September 2026. AI-assisted concept development and layout. The three illustrations are AI-generated conceptual artwork. The faint background reuses the cover scene. Scenarios and the four-week pilot are proposals, with no outcome data claimed.

Reading the evidence

This is a vision and facilitation document. It does not establish a scientific theory, a treatment, a forecast or a validated assessment. Future factual claims and pilot findings require their own sources, consent and review.
